HEALTHY BITE

Complete College PC Setup & Running Guide

1. Software Requirements

To run Healthy Bite on a college computer, only basic software is required. The project includes its own lightweight PSR-4 autoloader with **zero external composer/npm dependencies**.

Component	Version	Purpose
XAMPP	v8.0 to v8.2+	Bundles Apache, PHP (>=8.0), MySQL, and phpMyAdmin.
Web Browser	Chrome / Edge / Firefox	To view customer menu, owner portal & admin panel.
Text Editor	Notepad / VS Code	To check or edit the .env configuration file.

2. Step-by-Step Execution Guide

Step 1: Start XAMPP Services

Open the **XAMPP Control Panel** and click **Start** for both **Apache** and **MySQL** (both will turn green).

Step 2: Import the Database

Open browser at **http://localhost/phpmyadmin** → Click **Import** → Choose **database/healthy_bite_dump.sql** → Click **Go/Import**. The database *healthy_bite* and all 12+ tables will be created automatically.

Step 3: Setup the .env Configuration

Make sure a **.env** file exists in the project root. Ensure **DB_HOST=127.0.0.1**, **DB_DATABASE=healthy_bite**, **DB_USERNAME=root**, and **DB_PASSWORD=** (empty for XAMPP default).

Step 4: Launch the Server (Recommended)

Open terminal/CMD in the project folder and run:

```
php -S localhost:8000 -t public
```

3. Demo URLs & Test Login Credentials

For your practical demo / viva, use the pre-seeded credentials below (All passwords: **Secret@123**):

Portal	URL	Email	Password
Customer Menu	http://localhost:8000/	— (No login needed)	—
Restaurant Owner	http://localhost:8000/owner/login	owner@greenhousekitchen.com	Secret@123

Super Admin	http://localhost:8000/admin/login	admin@healthybite.com	Secret@123
Kitchen Manager	http://localhost:8000/owner/login	manager@greenhousekitchen.com	Secret@123

4. Quick Troubleshooting

• **Port 80 Conflict:** If Apache fails to start due to port 80, run php -S localhost:8000 -t public to launch directly on port 8000.

• **Access Denied:** Ensure DB_PASSWORD= is blank in .env (standard XAMPP root password is empty).

• **Table/DB Not Found:** Ensure you imported database/healthy_bite_dump.sql in phpMyAdmin.
